

The Working Group on Methods for Missing, Data, Model Selection and Model Averaging – Research Topics and Applications

Christian Heumann

(Methods for Missing Data, Model Selection and Model Averaging,
Department of Statistics, LMU Munich)

09.02.2022, 16.00 (c.t.)

Online via Zoom

(Meeting-ID: 913-2473-4411; Password: StatsCol21)

As part of the presentation series of the working groups at the Department of Statistics, the working group on methods for missing data, model selection and model averaging gives an overview of its work. Beyond topics on missing data, research was recently extended to natural language processing (NLP) and several other topics and projects - methodological and applied ones. After a general review of the research areas, the Postdoc and PhD candidates present their topics.
